

Visualizing the Future

Special Exhibit

In an effort to prepare for climate change, the Tijuana River Reserve outlined scenarios that discuss potential changes to the river valley. These different “futures” are informing management approaches to ensure the long-term resiliency of rare and valuable habitats.

To link these scenarios to the community, artist in residence, Audrey Carver, brought the science to life through her painting.

Exhibit includes four mural paintings and several watercolors.

Art is how Audrey Carver interprets the world around her. When she was only two years old, the artist within blossomed, as she colored pieces of paper, the walls, the floor and even her feet- all potential masterpieces. Now, at 17, she attends the renowned Idyllwild Arts Academy. Through her paintings, she shares the beauty and drama of the natural world, and communicates the importance of respecting our environment to create a sustainable future.

*Special thanks to the **Climate Science Alliance – South Coast** for helping to make this exhibit possible through their Artists in Residence Program.
