

# Teachers on the Estuary

for Tijuana River National Estuarine Research Reserve

**October 27 & 28th, 3:00-5:30pm (virtual)**

**November 9th 8:30-4:00pm (in the field)**

Designed for middle and high school teachers

Spend time with estuary  
educators and scientists

*"This TOTE experience is an incredible opportunity to dive into real data about a local phenomenon. The experience of seeing how a scientist uses data to understand the local environment strengthens educator's ability to teach and use data literacy in the classroom. Teachers are able to expand their adult understanding of estuarine science to feel more prepared to address these topics in their classrooms."*

- Crystal Howe, Environmental Literacy Coordinator, SD County Office of Education

Access and use real data

**Teachers on the Estuary (TOTE)** is a teacher training program that explores Authentic Data Literacy and brings coastal research into the classroom.

At this training you will:

- see and experience science being done at the Tijuana River NERR and learn how you can use it to enhance your teaching.
- interact with Reserve researchers, visit wetland restoration sites, and see the long-term monitoring that is used to manage these projects (living experiments).
- find out how to integrate your training experiences with online nationwide Reserve data and our virtual and in-person monitoring-based field trips.

## Reserve your spot Today!
